

WHAT IS PRP THERAPY FOR HAIR

PRP (Platelet-Rich Plasma) therapy for hair loss is a three-step medical treatment in which a person's blood is drawn, processed, and then injected into the scalp.

PRP, Platelet-rich plasma prepare by taking from one or two tubes of your own blood. Then running it through a centrifuge to concentrate the platelets

These activated platelets are then injecting directly into your head tissue

This releases growth factors that stimulate and increase the number of reparative cells your body produces.

Experts in the medical community think that PRP injections trigger natural hair growth and maintain it by increasing blood supply to the hair follicle and increasing the thickness of the hair shaft.
